

Press release April 13, 2010

## **News from Shark Solutions!**

### **Shark Solutions awarded the "EU Prize for Green Products", by the Danish Minister of the Environment.**

*Shark Solutions are awarded the "environmental improvement prize" for developing a process, and production plant, for recycling PVB from laminated glass.*

*PVB, primarily from automobile windshields amount annually to approximately 50.000 tons on a worldwide basis, which either has to be landfilled or burned because until recently it has not been possible to remove PVB from laminated glass in industrial scale.*

*Shark Solutions has developed a method to separate, clean and re-use PVB. The processed PVB can be re-used in a considerable number of industrial applications and this recycled PVB can replace new PVB and other materials.*

*Recycled PVB costs much less than new PVB. The prize committee regard this project as a good and creative example as to how a known waste problem can be turned into a new value resource.*
